

Name: $\qquad$
Fibonacci Sequence and Fractal Spirals

1. First, we're going to figure out the Fibonacci sequence. Fill out the blanks below:
$0+1=$ $\qquad$
$\qquad$
$\qquad$ $+$ $\qquad$ $=$ $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$ $+$ $\qquad$ $=$ $\qquad$
$\qquad$ $+$ $\qquad$ $=$ $\qquad$
$\qquad$ $+$ $\qquad$ $=$ $\qquad$
$\qquad$ $+$ $\qquad$ $=$ $\qquad$
2. List each number after the equal sign: $\begin{array}{lll}1 & 1 & 2\end{array}$ $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
3. Now, square each number: 114 $\qquad$
$\qquad$
4. Add two adjacent numbers fróm thé list above together.
$1+1=$ $\qquad$ $1+4=$ $\qquad$ $4+$ $\qquad$ $=$ $\qquad$
$\qquad$ $+$ $\qquad$ $=$

What pattern do you see? Circle those numbers where you've seen them before!
5. How about when you add the squared numbers (from \#3) sequentially?

114

$1+1+4=$ $\qquad$ then add the next number in the sequence to that
$\qquad$ $+$ $\qquad$ $=$ $\qquad$ $+$ $\qquad$ = $\qquad$ $+$ $\qquad$ $=$ $\qquad$
6. List the numbers from above after each equal sign (=): $\qquad$
$\qquad$

## Fibonacci Sequence and Fractal Spirals

7. How is each number listed in \#6 expressed as a multiplication of numbers in the Fibonacci sequence, listed after \#2?
your first number ____ $\qquad$ your second number $\qquad$ $=$ $\qquad$
$\qquad$ your third number $\qquad$ $=$ $\qquad$ x $\qquad$ your fourth number $\qquad$
$\qquad$
$\qquad$
Another fun and mind-blowing fact...
8. Going back to the original Fibonacci sequence, divide the larger number by the previous smaller number and let's see what we get. The original sequence (\#2) is:

Golden ratio $=1.618033 \ldots$
9. Let's do some graphing to see more about how this works!
a. What is the first number of the Fibonacci sequence? $\qquad$
On the graph paper at the end of this handout, there is square that is $1 \times 1$.
b. What's the second number of the Fibonacci sequence? $\qquad$
Right above the square you just drew, draw another $1 \times 1$ square.
c. What's the second number in the Fibonacci sequence? $\qquad$
Directly to the left of the two existing squares, draw in a $2 \times 2$ square.
d. What's the next number in the Fibonacci sequence? $\qquad$
Right below your existing squares, draw a $\qquad$
$\qquad$ square.
e. What's the next number in the Fibonacci sequence? $\qquad$
To the right of all that you've drawn, draw a $\qquad$ x $\qquad$ square.

## Fibonacci Sequence and Fractal Spirals

f. What's the next number in the Fibonacci sequence? $\qquad$ Above all that you've drawn, draw a $\qquad$ x $\qquad$ square.
g. What's the next number? $\qquad$
To the left of all that you've drawn, draw a $\qquad$ x $\qquad$ square.
h. What's the next number? $\qquad$ Below all that you've drawn, draw a $\qquad$ x $\qquad$ square.
... To the right of that would be the next square, but we've run out of room.
10. Now let's see how we can make a pattern out of these squares.

In the original square, draw a line from the bottom left to the top right.
On the next $1 \times 1$ square, continue that line across your square, from the bottom right to the top left.
Cross the $2 \times 2$ square from the top right to bottom left.
Cross the $3 \times 3$ square from the top left to bottom right.
Cross the $5 \times 5$ square from bottom left to top right.
Cross the $8 \times 8$ square from bottom right to top left.
Continue the line across the $13 \times 13$ square and the $21 \times 21$ square, wrapping up with a line that would go through the $34 \times 34$ square.
11. What pattern do you get?
12. Where do we find spirals naturally?
13. Count the number of things that make up a spiral on a pineapple or a pine cone or the number of petals on a flower or number of spirals on a froccoli or seeds of a sunflower.

They all occur in Fibonacci numbers! Nature is full of mathematical patterns! Amazing, huh? See what other cool patterns you can figure out in nature.
